

ABSTRACT OF THE DISCLOSURE

Disclosed are a method and a system for storing data of a mobile communication terminal having a wireless access to the Internet function. The mobile communication terminal includes a camera, a memory, and an image processing unit for processing an image captured by the camera to generate image data. An image data storage mode set in the mobile communication terminal is detected when the camera starts an image capturing operation. It is determined whether to access the Internet via a wireless connection according to the detected image data storage mode. A wireless Internet access is performed according to the determination result. The image data generated from the image processing unit is transmitted in real time to a remotely-located file storage device having a memory through the wireless Internet connection.
